Your Assignment

Background

1 Blending Mode- Choose 2 pictures insert them in the BLENDING MODE FOLDER of the final psd. Shrink the pictures so they fit inside frame 1. Then use a blending mode to combine the two pictures. This was one of our first assignments. Remember the blending mode is just above the layers in a dropdown menu that says NORMAL.

2 The PLANE- We will work on this one on friday.

3 CLONE TOOL- This is the only section that already has a picture in it for you. Create a new layer inside the clone folder and title it clone. Then with the clone layer selected remove the scratches in the picture the best taht you can.

4 Combine two pictures- Find two pictures to combine into one picture. This is different from the blending mode section. Drag the pictures into the final and put them into the Combine 2 Pictures folder. Shrink the pictures so they will fit into frame 4. Think here about the dwelling assignemt where you had to bring in pictures to fit in the background. You will need to make use of the selection tool for this part.

5 Write your own assignment- Here you can creat your own assignment. You may want to create an out of bounds pистure in this section or something using the warp tool. You decided but be ready to explain what you did and what tools/effects you used.

TAKE A LOOK AT THE EXAMPLE . Notice the clone section has not been completed. Also your final will not include the text overlay instructions.
